

Counting on from nine

Counting strategies

How will you solve this task?  
**5 + 9**

Counting first 5 and then 9 - getting stuck with not having enough fingers :)

$5 + 10 - 1 = 14$

$5 + 5 + 4 = 14$

Counting

Counting Up to 10 and then adding what is missing (4).  
 $9 + 1 + 4$

5, 6, 7, 8, 9, 10, 11, 12, 13, 14

Direct modelling

Derived fact/ flexible strategies

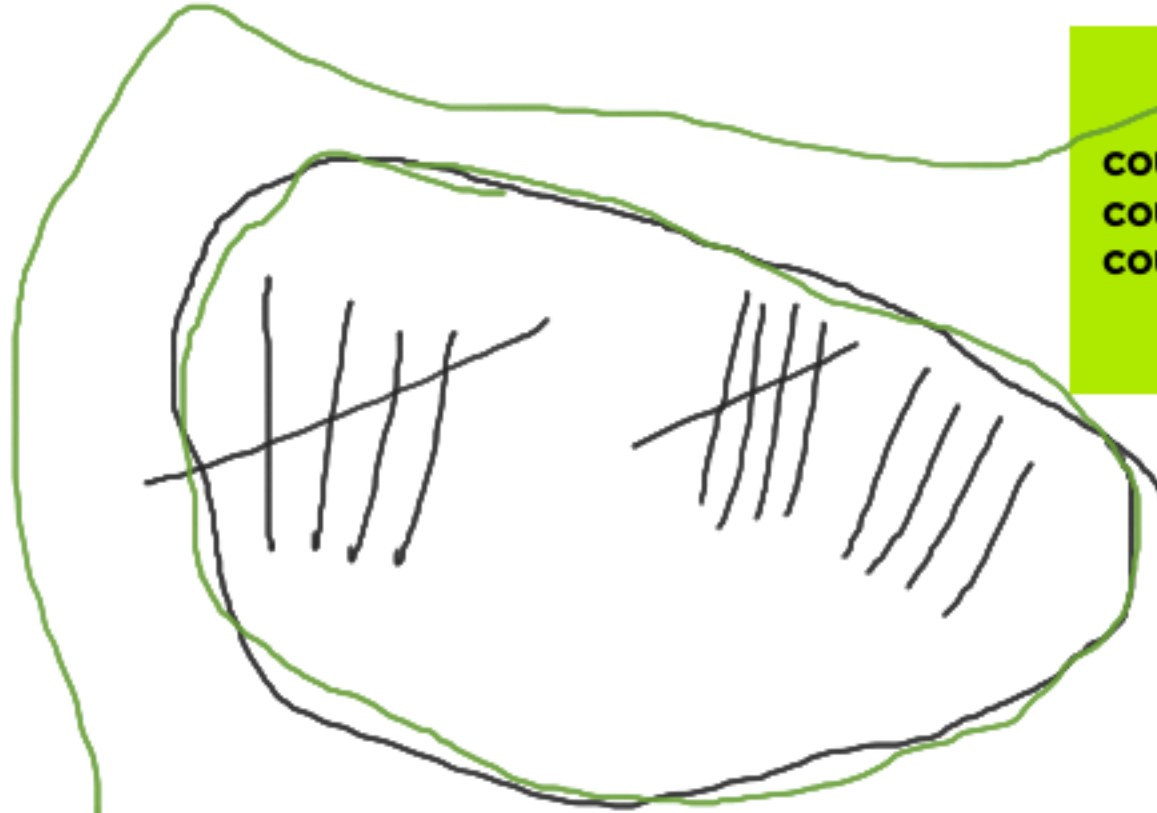

Using math retrieval

$9 + 1 + 4 = 14$

Using their knowledge of 5+5 is 10 and then adding on the rest

Adding 10 and subtracting  
 $1.5 + 10 - 1$

count five, count nine, count all again

In relation to this one I know a beautiful activity which is made by peers, so they have fingers enough :)

Number facts

Just know it
